# Launching a Project on Shopware 6 with Zero Experience

**- Our Journey -**

# Introduction

Radu Barbu

Technical Lead

- over 20 years experience in the web development industry
- 14 years Magento 1 and 2 both as certified developer
- 3 years Symfony development experience
- no experience with Shopware

Any Shopware Experience 6  
months ago?

# The Task

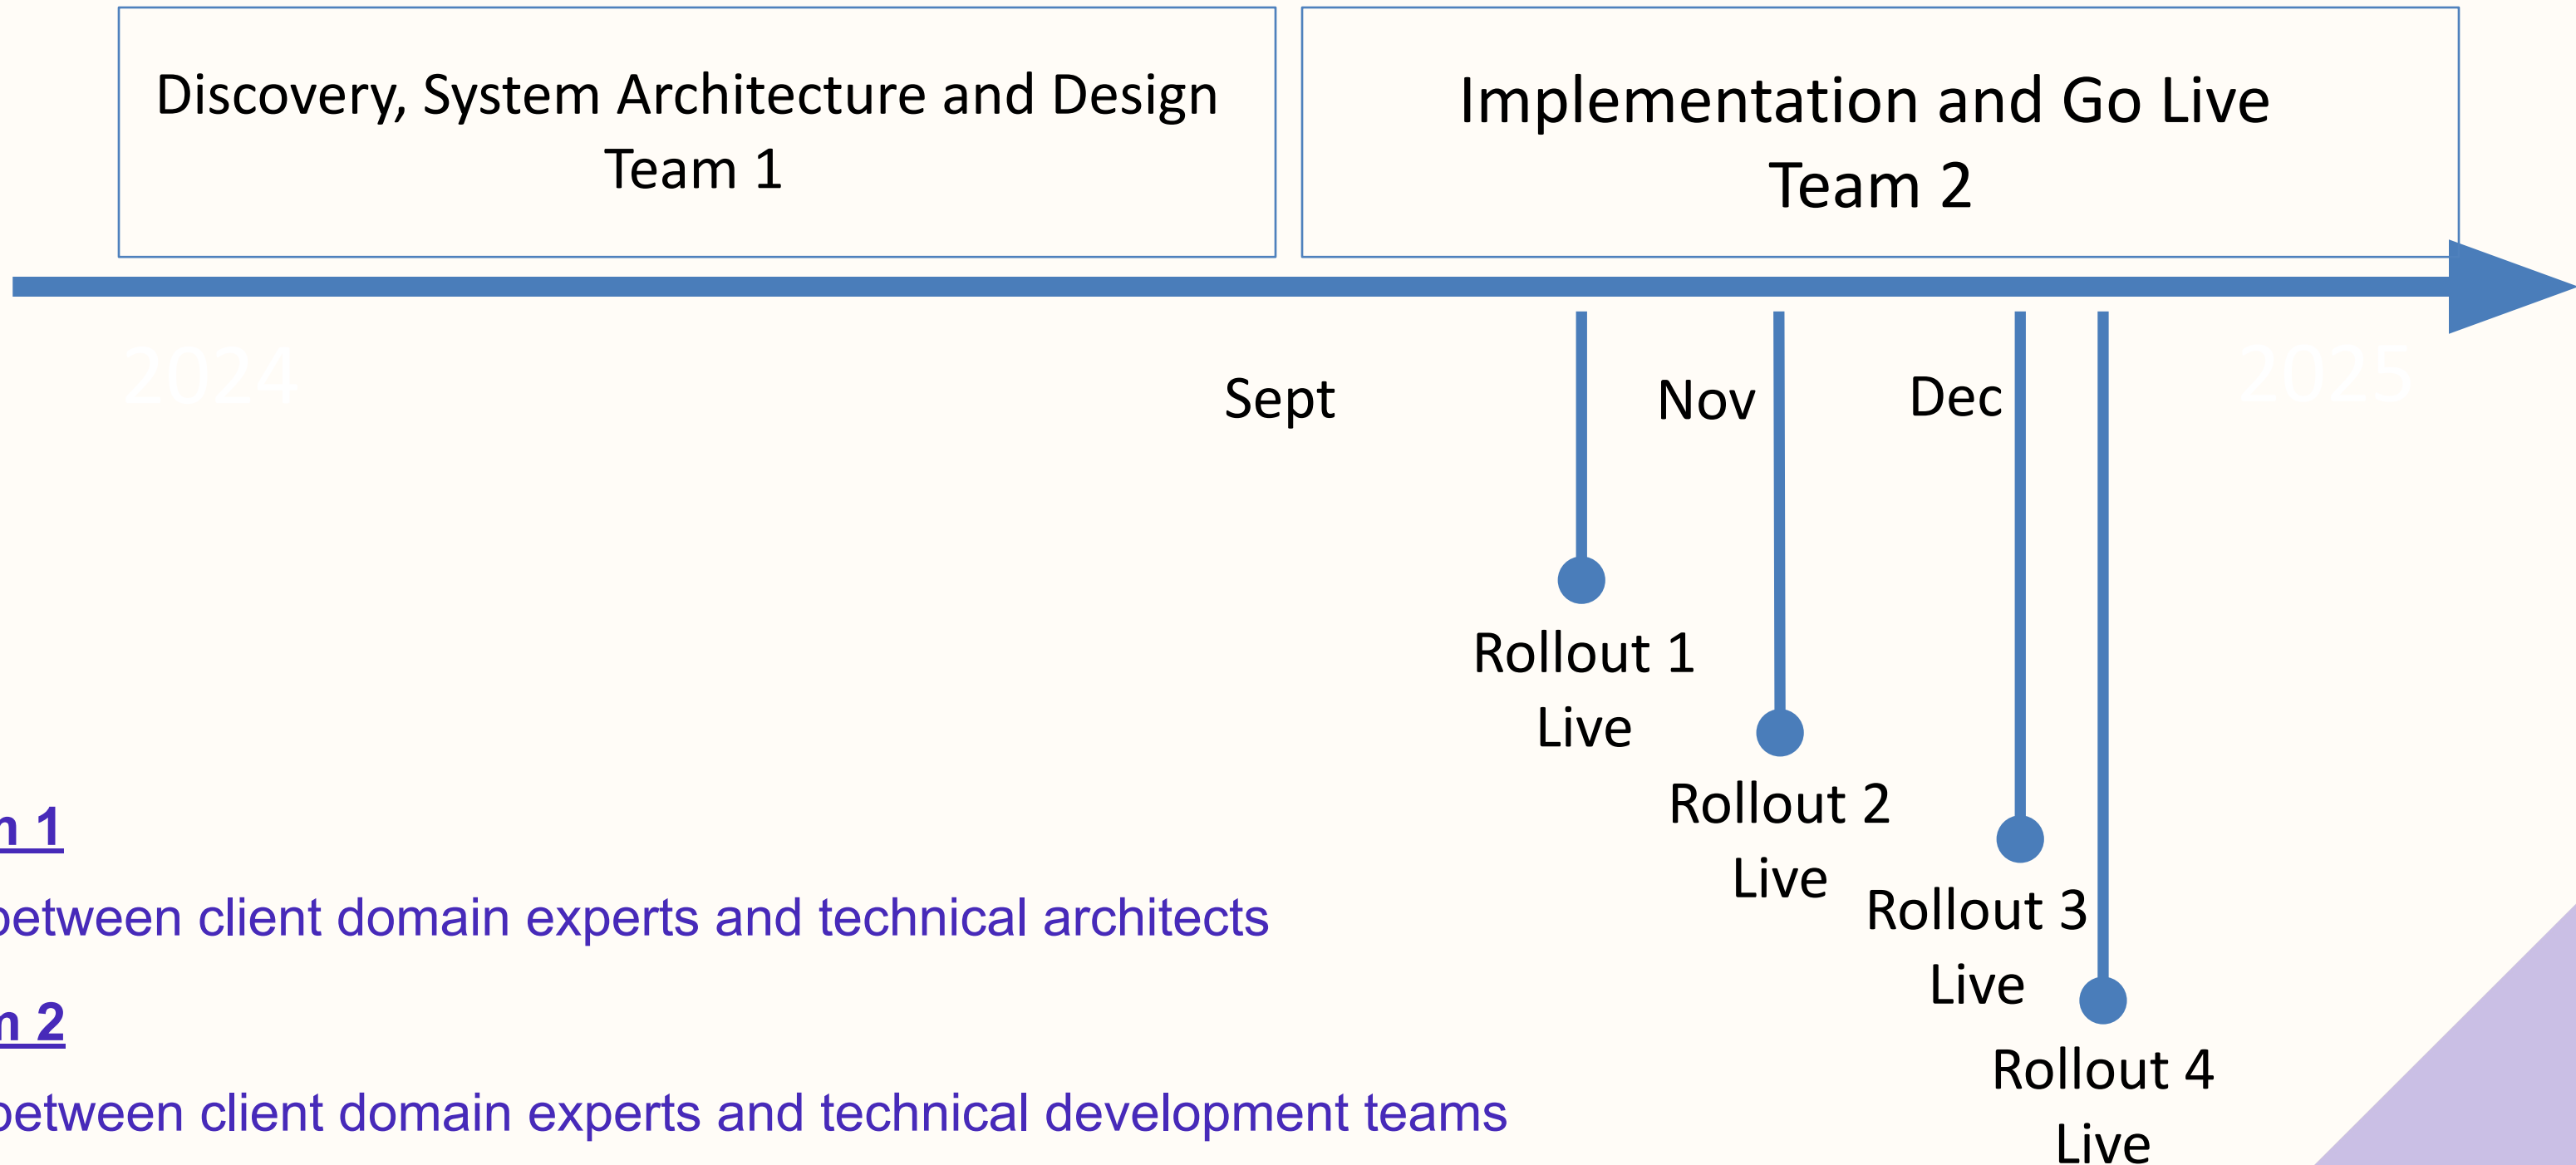

Migrating a legacy, highly customized eCommerce platform to a modern ecosystem with multiple integration points to SaaS solutions.

# The Challenge

Zero Shopware Experience

Integrations with various SaaS platforms (PIM, CRM, WMS) using an IPAAS solution.

# The Project Team and Timeline

## Team 1

Mix between client domain experts and technical architects

## Team 2

Mix between client domain experts and technical development teams

# Why Shopware?

	 shopware	
UI/UX and Frontend		
Product management	✓	✗
Pricing flexibility	✓	✗
Product customization		
Extensions on the market	✗	✓
Cost of Ownership, Hosting, Support	✓	✗
Scalability, Internal knowledge	✗	✓
Client fitting within the Ideal Customer Profile		
Long term maintenance and support	✓	✗

# Why Shopware?

UI/UX and Frontend, Product management, Pricing flexibility

- ✓ Customizable Frontend → Faster development & lower costs
- ✓ Streamlined Backend → Improved team productivity & easier learning curve
- ✓ Efficient Product Management → Simplifies operations & inventory handling
- ✓ Flexible Pricing & Customization → Ideal for Client's diverse product range
- ✓ No-Code Tools → Empower teams with self-sufficiency
- ✓ Shopping Experiences, Flowbuilder & Rulebuilder → Simplify customization and automation
- ✓ Marketing & Content Teams Independence → Update pages and launch campaigns without IT
- ✓ Faster Execution → Reduce reliance on developers for routine changes

# Why Shopware?

Extensions on the market: resources, integrations, community

- ✓ Higher Adoption Rate → 88K+ users vs. 16K for Shopware, ensuring broader support
- ✓ Global Community → More diverse input and wider accessibility compared to Shopware's mainly German community
- ✓ Stronger Integrations → Ready-made compatibility with required SaaS integrations
- ✓ Extensive English Resources → More documentation, forums and support available in English
- ✓ More Pre-Built Solutions → Higher chances that existing features cover business needs, reducing custom development
- ✓ Larger Developer Pool → Easier to find skilled Magento developers compared to Shopware
- ✓ Greater Market Adaptability → Designed for a global audience with required features readily available

# Why Shopware?

Cost of Ownership and Support

- ✓ Lower hosting costs
- ✓ Less complex, lower ownership costs
- ✓ Easier developer training (Symfony-based)
- ✓ Faster backend user onboarding
- ✓ Simplified feature additions
- ✓ Paid support includes 2.5 days of consultancy
- ✓ Access to a dedicated support team

# Why Shopware?

## Scalability and Internal knowledge

- ✓ Greater scalability for market expansion and high order volumes
- ✓ Proven track record in building large-scale solutions
- ✓ Strong in-house expertise (2 Magento senior developers + 1 Magento Solutions Architect)
- ✓ Familiarity with Magento's ecosystem reduces risks and unknowns
- ✓ Less risk of delays due to existing knowledge of bugs, workarounds, and best practices
- ✓ More predictable development process with minimal technical debt

# Why Shopware?

Client fitting within the Ideal Customer Profile and  
Long term maintenance and support

- ✓ Ideal fit for Shopware's B2B customer profile
- ✓ Aligned with Client's Gross Merchandise Value (GMV) range
- ✓ Supports open-source and on-prem solutions
- ✓ Ecosystem matches Client's long-term goals
- ✓ Internal insights make it a safer near-to-mid-term choice
- ✓ Shopware 6 has long-term viability

... and the winner is ?!?

# The Learning Curve & First Steps

## Resources & Learning Methods

- ✓ Shopware Academy and Documentation
- ✓ Shopware Knowledge on Youtube
- ✓ The Codebase

## First weeks

- ✓ Small successes that built confidence
  - ✓ Building the first build & deploy pipeline and deploying on the dev serve
  - ✓ Installed the custom theme
  - ✓ Business was able to play and test with the shop very fast

# Development and Implementation

- ✓ Dockware was instrumental in streamlining local development for our developers.
- ✓ Our initial integration approach used a mix of API calls and webhooks. Thanks to Shopware's flexibility, we easily adjusted some API calls to webhooks to streamline data flow and prevent concurrency issues
- ✓ Early on, we relied on certain Shopware extensions but eventually removed them due to unresolved bugs and time constraints.
- ✓ The no-code/low-code approach presented challenges in managing a large number of extensions. To ensure only high-quality extensions were integrated into the project, we implemented a Shopware Extension Validation Checklist and added a dedicated Shopware Sandbox environment so we can provide access for debugging.
- ✓ We onboarded two additional developers - one with intermediate Shopware experience and another with only Symfony experience. Thanks to Shopware's intuitive architecture, both became productive quickly.

# Unexpected Lessons & Takeaways

## Positives

- ✓ Previous experience with Magento and Symfony helped ease the learning curve.
- ✓ Managed to turn initial challenges around once progress became visible.
- ✓ Shopware Extension support and management provided valuable flexibility.

## Not too positives

- ✓ The initial lack of Shopware experience within the team led to challenges in defining development stories, creating some business-side anxiety.
- ✓ Community documentation being primarily in German made it difficult for developers to find solutions quickly.
- ✓ Overlooked the need to streamline access for third-party extension developers, which, combined with their response times, delayed extension fixes.
- ✓ Issues updating / overwriting the Zenit theme due to it's architecture

# The Results & Future Plans

## Project outcome

- ✓ Released 4 rollouts - 1 per week
- ✓ Strategy
  - ✓ Have everything deployed and configured before go live
  - ✓ Update DNS on go live day
- ✓ Orders started coming on the new platform in minutes after go live

## What is next?

- ✓ If business asks for it, it would be pretty easy to launch another sales channel for a new country if they open up new business

Starting with zero experience is not a roadblock,  
it's an opportunity to learn fast.
